

Prove the site's real risk position before the insurance market decides it

We help the owner prove that the data centre is better protected than the insurer may currently assume—and identify the real gaps before the insurer does.

Know what the insurer believes.

Prove what is actually true.

Fix what materially changes the risk.

Negotiate with evidence.

For risk, finance, engineering and broker teams deciding what evidence or remediation must be completed before renewal.

The owner completed the work—but the insurer still sees an open recommendation

INSURER RECOMMENDATION

Complete medium-voltage switchgear maintenance and provide evidence for every asset.

Different contractor names should not keep good evidence hidden—and a genuine gap should not be discovered after the market forms its view.

A verified, cited and renewal-ranked decision pack—not a generic risk register

PARTIALLY CLOSED		EVIDENCE STATUS	
Recommendation R-17 still needs proof for MV-C.			Sufficient Correct site, asset, scope and period
			Partial Only part of the request is proven
			Stale Outside the accepted period
			Wrong scope Wrong asset, test or location
			Control gap Evidence shows a real deficiency
			Pending Carrier has not accepted closure
Verified coverage	MV-A, MV-B and MV-D fully evidenced		
Remaining gap	MV-C has thermography but no breaker-maintenance record		
Required action	Retrieve the record or complete the missing maintenance		
Decision date	Close by 12 September before market submission		
Broker action	Confirm whether partial closure changes the carrier position		

The product prepares the evidence and priority. Risk, engineering, broker and legal teams approve every external statement and coverage decision.

Remove avoidable uncertainty before the market fixes its position

TODAY

Evidence is assembled late, site by site, after assumptions have already hardened.

- A file is counted as proof
- Different names hide valid evidence
- All recommendations look equally urgent
- The broker receives material too late
- Premium movement remains unexplained

WITH UNDERWRITING READINESS

The owner enters renewal with verified facts, ranked gaps and a substantiated site story.

- ✓ Check asset, scope, period, provenance, result and closure need
- ✓ Resolve sites, assets, controls, reports and contractor records
- ✓ Rank by loss, interruption, renewal timing, cost and feasibility
- ✓ Prepare evidence and remediation 90–120 days before renewal
- ✓ Separate market, value, claims, hazard, coverage and engineering drivers

Practical value: less renewal friction, stronger evidence reuse, earlier risk improvement and a clearer coverage and terms position.

Connect insurer belief to site truth, material gaps and an owner action

THE DATA WE NEED

1	Market position	Policies • submissions • questionnaires • quotes
2	Insurer view	Risk reports • recommendations • correspondence
3	Site truth	Assets • construction • protection • dependencies
4	Control evidence	Fire/electrical tests • maintenance • impairments
5	Financial exposure	SOV • claims • interruption • restoration
6	Action context	Capital plans • owners • renewal and notice dates

HOW THE ANSWER IS BUILT

- 1 Reconstruct what the market believes**
Extract prior submissions, assumptions, recommendations and terms
- 2 Verify what is actually true**
Link evidence to the correct site, asset, scope and period
- 3 Separate evidence gaps from control gaps**
Distinguish missing proof, stale records and genuine weakness
- 4 Prioritise what changes the renewal position**
Rank retrieval, remediation and clarification by impact and timing

Decision value comes from hazard × site vulnerability × protection evidence × critical dependency × restoration time × policy response.

What must be true before we test the use case

Start with one owner, its broker, three to five sites and one evidence theme—not the full insurance programme.

✓	Broker participation	Access to market questions, submission and carrier feedback
✓	Current ♦ prior position	Reports, recommendations, SOVs, policies and quoted terms
✓	Engineering evidence	Fire or electrical records linked to sites and assets
✓	A usable renewal window	Start 90–120 days before submission so action is possible
✓	Named reviewers	Risk and engineering teams can validate closure and priority

If broker feedback or engineering validation is unavailable, position this as a managed renewal service—not a defensible intelligence product.

Plain language on the left; technical capability on the right

WHAT THE CLIENT HEARS	WHAT WE BUILD	WHAT IT DOES
● Read policies, reports and certificates	Document intelligence	Extract terms, recommendations, questions, evidence and citations
● Know which evidence belongs to which asset	Entity resolution	Link sites, assets, controls, evidence, policies and claims
● Check whether the proof is sufficient	Semantic matching + rules	Test scope, currency, provenance and closure requirements
● Find contradictions and deadlines	Data-quality + obligation rules	Flag SOV conflicts, stale facts, inspections, notices and renewals
● Connect a gap to business impact	Exposure modelling	Link physical loss paths to downtime, value and policy response
● Choose the action that matters most	Multi-criteria optimisation	Rank evidence and remediation by impact, timing and feasibility

Control boundary: no autonomous policy interpretation, compliance certification, premium promise, coverage binding or external submission.
